Honeyderm®: a balm with 70% honey

Protective film
Maintains a protected moist environment due to the high osmolarity of **honey**[17] and **hyaluronic acid**[2]

Skin regeneration
Protective and structuring properties of **honey**, **vitamins**[18] **A and E and lavender essential oil (EO)**[19]

Softening the skin
Moisturising action of *Aloe vera*[20] and **Shea butter**[2]

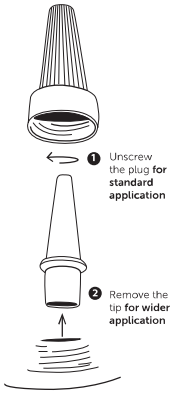

Discourages licking
Repellent effect of **lavender EO**

Available in 2 formats:

- 62 g for in-clinic use
- 12 g for home use on skin and coat

62 g tube: adaptable tip for localised or widespread application

HONEY 70%*

Skin restoration due to:

- High osmotic power
- Acidic pH (3.2 - 5.4)
- Low water content
- Over 200 compounds (enzymes, organic acids, vitamins, amino acids)

***Warm to room temperature for a smoother application.**

When to use Honeyderm® Balm?

- When **skin restoration** requires the formation of a protective film
- When the **skin restoration process** can benefit from a moist environment
